

# GET A LEG UP ON DVT

## Option™ ELITE

Retrievable Vena Cava Filter

The only IVC filter  
labelled for delivery  
via **Popliteal Access**

## CLEANER XT™

Rotational Thrombectomy System

The only wall-contacting  
rotational thrombectomy  
system indicated for use in  
the **Peripheral Vasculature**

Combining CLEANER XT™ with Option™ ELITE  
for complete thrombus resolution

MEDICAL DEVICES

# The CLEANER XT™ Rotational Thrombectomy System and the Option™ ELITE IVC Filter combine for a uniquely effective approach to treat DVT and prevent PE through a single access site

**CLEANER XT™**  
Rotational Thrombectomy System

“With this device, a greater than 50% thrombus resolution was achieved in 97.6% of patients, without significant morbidity, in a single-session procedure.”<sup>1</sup>

- The only wall-contacting rotational thrombectomy device indicated for use in the peripheral vasculature
- Enables infusion of thrombolytics and contrast media through the built-in 3-way side-port and distal side hole
- Guidewire-like design enables steerability through the peripheral vasculature
- Powerful rotating action of the single sinusoidal wire effectively macerates wall-adherent clot while reducing the risk of endothelial damage<sup>2</sup>
- Single-piece system, available in low-profile 6F (9mm sinusoid) or 7F CLEANER 15™ (15mm sinusoid) for varying vessel diameters
- Ready to use out of the tray in 65cm or 135cm lengths, with no assembly required and no capital equipment to purchase

**Option™ ELITE**  
Retrievable Vena Cava Filter

Now available with a 100cm delivery sheath for popliteal access

- The only IVC filter indicated for delivery via popliteal access
- Increases efficiency in DVT treatment procedures by eliminating the need for patient repositioning after filter placement
- Smallest delivery system available with a 5F ID delivery sheath, enabling more access options
- Over-the-wire delivery provides additional support of the apex during deployment and maintains guidewire access for subsequent procedures
- Over six years of positive, consistent and proven clinical performance with very low risk of complications<sup>3</sup>
- Six retention anchors and a transitionless apex combine for easy retrieval

The CLEANER XT™ Rotational Thrombectomy System is indicated for mechanical declotting and controlled and selective infusion of physician-specified fluids, including thrombolytics, in the peripheral vasculature.

The Option™ ELITE Vena Cava Filter 100cm System is intended for the prevention of recurrent pulmonary embolism (PE) via placement in the vena cava for pulmonary thromboembolism when anticoagulant therapy is contraindicated, for failure of anticoagulant therapy in thromboembolic diseases, for emergency treatment following massive pulmonary embolism where anticipated benefits of conventional therapy are reduced, and for chronic, recurrent pulmonary embolism when anticoagulant therapy has failed or is contraindicated.
